

AGILE ENERGY TRANSITION – ATTITUDE AND METHODS

WORKSHOP, 1 DAY

Players in the energy market are confronted with ever faster and more comprehensive change. New business models must be developed and processes further optimised. At the same time, people must not only be taken along, but must actively participate. Agility and a dynamic organisation are generally praised as a panacea. But what does that mean in concrete terms in the energy market? Where do concepts make sense and where not? In this interactive workshop, you will get to know the basic attitude, understand how a dynamic organisation brings you advantages and which methods you can use in the context of the energy market.

Your contents

The workshop is designed so that on the second day you actively apply common methods and carry out interactive practical exercises.

Agility: What does it mean?

- The agile mindset
- The agile team: tasks and roles instead of positions
- The dynamic organisation and leadership

Agile tools and frameworks

- Basic principles and overview of agile methods
- Agile working using the example of Kanban and SCRUM
- Communication in the team: review, retro and decision making

Agile energy world

- Challenges and opportunities
- Field reports and practical examples from the energy market
- How to become scrumisch – finding your own solutions

Creative task for in between

Where and how do you want to implement agility in your company? Which frameworks and tools do you want to use? What are the biggest challenges and opportunities?

Group work

- Try out agile working: using a case study "Lean Stadtwerk" or your own question, you will learn how to apply the first methods in practice.

Final round
