

FUTURE OF THE ELECTRICITY MARKET

WORKSHOP, 1 DAY

The energy transition poses new challenges for the actors and the electricity market design. Renewable energies meet existing power plants and new ones to be built. Investment and financing conditions as well as amortisation through revenues in the electricity market of the future are crucial for each technology. This seminar provides participants with a comprehensive overview of current issues in the electricity market, political decisions and goals, as well as market and price scenarios and what they mean for market participants.

Possible contents

Renewable energies in the electricity market

- Further development ideas for the next EEG amendment: symmetrical market premium, change of marketing forms
- Over-21 plants: potential for continued operation after the end of subsidies
- Post-EEG: expansion even without remuneration?
- Needle's eye regulation: can we manage the energy transition?

Flexibility options and storage in the electricity market

- Who has what flexibility needs and who can meet them?
- Overview of flexibility options and their economic viability
- Prosumers, e-mobility and regulation

Sector coupling: energy transition in the electricity and transport sectors

- E-mobility, Power-to-X and Co.: which technologies are available?
- Additional energy demand from renewable energies - how can this be achieved?
- The eye of the needle: regulation: levies, charges and other obstacles

Coal phase-out and its consequences

- Current status in Germany and Europe
- Comparison of different phase-out scenarios on the electricity market and its prices
- Consequences for the energy mix, CO₂ targets and the future of the electricity market

Guided discussion with focus on participants

TARGET GROUP

- Board members, managing directors and decision-makers from procurement and sales of energy supply companies
- Banks, investors and energy marketers
- Project developers of renewable energies
- Representatives of politics, authorities and associations

YOUR BENEFITS

After this workshop you will be able to:

- differentiate current proposals for the electricity market of tomorrow,
- evaluate the consequences of technological and regulatory developments,
- identify key issues for the future viability of the energy supply.

In combination with the **Intensive Seminar PPA Evaluation** as well as **Batteries on the Electricity Market**, this seminar is supplemented by detailed knowledge.
