

ONLINE-SIMULATION GAME: CROSS-BORDER INTRADAY

How do I optimally market my European power plant portfolio on the intraday market?

Many power plant operators are internationally positioned and manage a diverse portfolio of power plants in various European countries. Would you like to try this out? In this online-simulation game, you slip into the role of portfolio manager and control the deployment and intraday marketing of a cross-border power plant fleet. Cross-border interconnection capacities must be booked in advance. This is a playful way to consolidate your knowledge and gain valuable experience for your job.

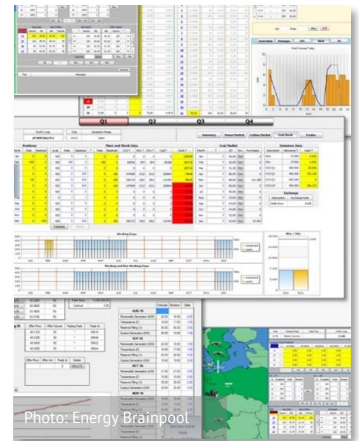

Your contents

Session 1: Introduction to the simulation game and exercises

- Explanation of the game, the processes and the user interface
- Clarification of professional and technical questions about the game
- Step-by-step instructions of a cross-border game scenario
- Exercises on buying and selling electricity on the continuous intraday market

Session 2: Game round - cross-border intraday trading

- Selling electricity from your power plant fleet on the spot market (intraday)
- Several scenarios are played out
- Discussion and evaluation

System requirements

- Stable internet connection, microphone, webcam if necessary
- MS Teams or correspondingly compatible web browser (Edge, Chrome)
- An RDP file is used to access the online simulation. Ideally, you should use Windows as your operating system (workarounds for Mac are available on request). IT security must allow access to the simulation file on an external server. A technology check can be carried out in advance.

TARGET GROUP

- Specialists and managers in the electricity industry in the field of energy trading, procurement and sales
- Professionals from trading, marketing of electricity, balancing group, schedule, load or portfolio management of conventional or RE plants
- Newcomers and career changers in the energy sector with basic knowledge of the electricity market

YOUR BENEFITS

- After this simulation game you will be able to:
- use power plants according to the variable marginal costs,
 - explain processes in the intraday market, and
 - develop strategies for cross-border trading.

The simulation game is the ideal complement to the seminars **Starter kit in the electricity industry**, **Revenue potential at short-term energy markets** and **EEG, PPAs and Co: sales options for renewables**.
