

INTERNATIONAL ENERGY MARKETS

INDIVIDUAL TRAINING, ANALYSES AND CONSULTING

For numerous international markets, the German energy market design represents a promising potential for the optimisation of existing structures and the adaptation of innovative market aspects – in particular in the context of the global expansion of renewable energy sources and the liberalisation of the energy markets.

For **international players** such as decision-makers, stakeholders, regulatory authorities, energy supply companies and other market participants, Energy Brainpool offers comprehensive solutions in the field of training, analysis and consulting, which are tailored to the needs of individual companies and projects.

Training, workshops and excursions

- Individual customised workshops impart fundamental and specialised knowledge on all aspects of the energy markets
- Consulting on implementation of suitable teaching methods as well as individualised agenda
- Interactive teaching methods with illustrative examples and discussion
- Organisation of guest speakers, excursions to stock exchanges and visits to market players
- Assistance in organising accommodation for foreign delegations
- Presentations at conferences and events

Consulting and studies

Energy Brainpool supports ministries, authorities, regulators and other stakeholders around the world with individual consultancy projects, scientific analyses and practice-oriented studies on current issues, for example:

- Studies and price simulations on the effects of the market design as well as on the expansion of renewable energy, on the national power plant park and on resource price trends to the year 2040
- Consultancy services on successful Energy Transition Management regarding market design and design of funding systems including funding and apportionment systems
- Consultancy services on market entry, business model development and optimisation for foreign companies in Germany as well as German companies abroad
